Aaron is one of the best TA's I've ever had at UOIT. He broke down Control Systems into easy to understand steps, and he answered my questions with extreme clarity. Aaron + _____ teaching was the best combination for this course - I am very, very pleased with this course's structure.

Aaron was a fantastic TA, taking time to answer questions and assist students with problems even after the allotted tutorial time was finished. He enjoyed talking about real world applications and his sense of humour livened the room.

Aaron should be teaching the whole course instead of the tutorial. He is a great teacher and explains the materials in a way that everyone can understand and comprehend.

Clear and concise.
Thoughtful and interactive in explanations.

Aaron Tan is awesome! Promote him. Awesome TA

good

I could not have passed without the tutorial.

This man is a savage, he is the reason I am doing well in this class.

Keep doing what your doing.

This tutorial is the main reason why I understand most of the concepts in Control Systems. The TA starting the tutorial by demonstrating the required steps to solve a problem, in a clear manner, really makes understanding how to approach problems very easy; especially compared to the lectures.

Good TA. Respectful personality. Clear in answering any question. Always showing up on time. I would like to have as TA again.

This TA is awesome! He knows exactly what the students need to know, and does an excellent job in communicating that, even given the short tutorial length.

Hao (or Aaron as we call him) is an amazing teacher. He is enthusiastic and relatable. He does an excellent job of translating knowledge from the language professors often use, to layman's terms students can easily grasp and comprehend. Keep up the great work Aaron! I hope to see you as my TA or colleague someday!

Comments:

I found the tutorials much more useful than the actual lectures. The only complaint is I wish we had all the tutorials we needed done before we had a quiz or midterm coming up. One of the best TA's I've had over the years

Amazing TA. Anything not understood in the lecture he was able to explain very well and made things much more clear. I believe he is almost better at teaching the topics then the Professor.

Very good, he applied real life application when teaching. allowing us to understand what is being taught (much better than the lectures)
Must be Promoted

Aaron was available, either in person or through email, to answer any questions I had. He did a fantastic job teaching the material. The only comment I would make would be that I would like to see the solutions for the tutorials have a little more explanation in them and show all steps completely. This was one of the better tutorial sessions I have attended.

He makes you understand the material until you get it. He explains the material clearly and marks midterms fairly as possible

explained examples very well, was able to answer questions successfully as well.

Aaron did an excellent job with the tutorials. I appreciated his effort and dedication to helping me understand the material from a different approach/perspective. He presented material in an easy-to-follow format and when appropriate, listed step-by-step approaches on how to solve problems. Overall, he did an amazing job! He was very helpful, and a great TA as well!

Comments:

Aaron is a great guy, really explains stuff the way students would study and understand them.

he always helps students!!

One of the most helpful TAs I've ever had. He worked through examples and tried to explain everything to the best of his knowledge. Breaking larger problems into steps is extremely helpful. And he taught material I actually needed to know, compared to some ta's that go through math proofs for an hour.

Aaron is very nice and funny. He is also very enthusiastic about the course materials.

This tutorial would benefit from being longer. 50 minutes per week is not enough time to review the subject matter in this course.

YOooooooooooooo, THIS MAN IS PRETTY SICK STILLL. Man needs to get paid more. Explains stuff pretty clearly. Very helpful if you don't know *** about control systems and lectures don't help.

This tutorial was AMAZING, it was what helped me understand most of this course

The TA was extremely helpful and clear in his instruction. He was also very approachable and understanding to students when they had concerns. Overall, an excellent TA.

Knowledgeable and very helpful.

The tutorial leader is very hard to understand and he is not very helpful when we ask him questions. He mostly replies "Read the manual". Honestly, as third-year students, we know that the lab manual is the first place to go to when we are stuck. It is only after we can not resolve the problem from the manual that we go to the T.A. Additionally the T.A is very bad at resolving computer problems. For one instance he made us move around to 3 different computers wasting 1 hour of our lab. Overall the lab is very useful, however, the T.A make the lab very hard to understand and very hard to finish on time.
